3: Add a pit lid setup to sewage tank by placing sleeper from Bunnings around the tank and getting pit lids to fit.

We had to find and open the septic tank recently and it was recommended that we create a cover as opposed to just filling it back in.

The recommendation was to get some pine sleepers place them around the top of the tank, on their edge, in a rectangle shape back the dirt behind them and place a lid on top.

Due to the size on the tank and the length required we are going to place a sheet of checker plate over the frame.

Due to the curve of the top of the tank the 2 pieces of sleep over the top will need some trimming to fit once cut to length.

Materials

3 x 1800 x 180 x 75 pine sleeper will be on site

1 x 1800x 900 sheet of checker plate will be on site

8 suitable tek screws to join the sleepers

1 shovel in the container on site

1 wood saw

Time 2 hour only a guess

2 people
